Instagrom App

Github: https://github.com/dnp1204/instagrom
Demo: https://instagrom.herokuapp.com/

I. I code a copy version of instagram web version using Nodejs, Expressjs framework, Reactjs. I also used passportjs with google and facebook strategy for allowing users login with their google or facebook accounts

II. App features:
1. You can login by your google and facebook account
2. Easily accessing to upload an image
3. Searching other user by their name
4. Like and commenting posts
5. Follow and unfollow other user

III. Future improvements:
1. I am going to refactoring the Profile component since it is very low cohesion. It takes care too many jobs
2. Implementing the notification and registration. Currently, user can only use their google and facebook account to login.
